

DATA CONVERSION TO SPIRE

Convert to Spire.

As if you were always there.

Most accounting data conversions are not complete. Historical data is hard to get into the new system, so you have to keep the old system running "just in case" — and to access historical sales and other crucial accounting information. The Ingrid Data Conversion does a complete job. Our AI-powered engine interrogates your existing data, identifies what fits Spire natively and what doesn't, then translates the misfits into Spire's structure. **Result: 95%+ accuracy, full history, real retirement.**

95%+

Conversion accuracy
AI handles the edge cases that break manual conversions

AI

Interpreter
Re-maps data that doesn't fit Spire natively

Full

History preserved
AR, AP, customers, vendors, transactions — all native

Old

Old system lifetimes
The retirement is real — you can actually turn it off

Three steps. Full conversion.

HOW IT WORKS

1
Interrogate

Our AI-powered conversion engine reads your existing accounting data — every table, field, customer, transaction — and learns its structure, relationships, and business rules.

Source	Any major system
Method	AI Interrogation
Output	Schema + fit map
Time	Hours, not days

2
Interpret

When data doesn't fit Spire natively — custom fields, odd schemas, legacy quirks — our AI interpreter re-configures it into Spire's structure while preserving all history.

Re-mapping	AI-driven
Custom fields	Preserved
Business rules	Carried over
Confidence	95%+ accuracy

3
Retire

Full conversion means full retirement. Customer history, vendor balances, transactions, past year ends, audit trail — all native in Spire. The old system can finally come offline for good.

Old system	Off
History	Native in Spire
Reports	From Spire
Cost	One-time

WHY IT MATTERS

Finally turn off the old system.

Conversions usually don't get all the data. The new accounting system holds the new data, but the old one keeps running for history, legacy reports, and the audit you weren't expecting. Ingrid Data Conversion is built to actually finish the job — AI interpreter and all — so when you flip the switch, you stay flipped. Customer ledgers, AR/AP balances, transactions, past year ends, audit trail: all native in Spire, ready for any report, any auditor, any question.

Why teams choose Ingrid Data Conversion

- ✓ **95%+ accuracy**
The AI interpreter handles the edge cases — custom fields, odd schemas, legacy quirks — that break manual conversions and force "keep the old system" decisions.
- ✓ **Custom fields carried over**
Your business logic doesn't disappear. Custom fields, codes, and rules from the old system are mapped or interpreted into Spire so workflows survive the move.
- ✓ **Faster than manual**
Months of consulting work compressed into weeks. AI does the heavy lifting of schema analysis and re-mapping; your team validates and signs off.
- ✓ **Full history preserved**
AR balances, AP history, customer ledgers, transaction detail, past year ends — all migrated and native in Spire. Run any historical report straight from your new system.
- ✓ **Explainable audit trail**
Every conversion decision is logged — what fit natively, what the AI interpreter re-mapped, and why. Reviewable by you and your auditors at any time.
- ✓ **One-time cost, lifetime relief**
No more dual-system maintenance. No more "we still need the old server for read-only access." A clean retirement and a clean Spire installation.

Ready to retire the old system?

Show us your current accounting system and we'll show you what a 95%+ conversion looks like on your actual data — no commitment.
